DWA_07.4 Knowledge Check_DWA7

_____

1. Which were the three best abstractions, and why?

- createPreviewsFragment, this function is reusable because it takes an object and prints its first 36 results
- moreBooks, this function provides the next 36 books and is a higher order function as it makes use of the createPreviewsFragment inside it
- themeUpdate, this function is simple and will change the theme when called in the scripts file

_____

2. Which were the three worst abstractions, and why?

- I can only speak to one abstraction that I personally feel is bad / the worst, which is the createSearchHTML, this function is too long and busy and could have made use of smaller functions to simplify it.

_____

3. How can The three worst abstractions be improved via SOLID principles.

This abstraction can be made better by abstracting its contents into other smaller functions

_____
